ABRAHAM ESPINOSA GUTIÉRREZ

Software Developer

Mexico City, Mexico | +52 (55) 6468 8068 | espinosaga_@outlook.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Full-stack software developer with 2+ years of experience designing and shipping robust web applications using PHP, JavaScript, and CodeIgniter 4. Proven track record of translating ambiguous requirements into production-ready solutions within regulated, high-stakes sectors like banking. Trusted to manage end-to-end database architecture, third-party integrations, and technical leadership on critical projects.

SKILLS

Languages & Frameworks: PHP, CodeIgniter 4, JavaScript, Bootstrap, HTML/CSS (familiar: NodeJS)
Databases: MySQL, MongoDB, relational data modeling, migrations, seeders
Practices & Tools: Agile collaboration, Git, QA coordination, Docker, CRUD architecture, MVC, requirements analysis
Also proficient in: Excel, Access, Power BI, Microsoft Power Platform
Languages: Fluent in English and Spanish

EXPERIENCE

Junior Software Developer — Banco Covalto | Feb 2024 – Present

- Serve as the primary developer for a corporate onboarding and factoring (factoraje) platform for a third-party banking client. Autonomously drive the vast majority of ongoing development, taking ownership of new client requirements, system enhancements, and production bug resolution.
- Drove the critical migration of 5,000+ legacy finance records to a formal system under a strict bank regulatory deadline. Stepped into an informal leadership role to resolve project bottlenecks, developing a custom bulk upload module to accelerate development and ensure on-time delivery.
- Partnered with finance stakeholders to architect the MySQL relational database, modeling complex data hierarchies to map parent accounts into unique sub-accounts. Implemented rigorous programmatic validations to guarantee absolute data integrity during the transition.
- Built a bi-directional data correction flow between the onboarding system and Salesforce. Leveraged PHP webhooks to capture manual review triggers, automated client email notifications, and consumed SF APIs to push client-submitted corrections back to the CRM.
- Overhauled the legacy authentication module by implementing OTP verification, trusted device cookies, and refactoring security logs to guarantee comprehensive audit traceability and robust access monitoring.

Travel and Visa Coordinator — The Church of Jesus Christ of Latter-day Saints | Sep 2019 – Oct 2023

- Identified inefficiencies in the existing visa process and redesigned it, reducing associated expenses by nearly 90%.
- Automated repetitive workflows using Microsoft Power Platform, including extracting key data from emails for visa processing and sending automatic renewal reminders for visa cards nearing expiration.
- Built Power BI reporting covering thousands of visa processes and all flight travel, giving the team visibility it previously lacked.
- Advised clients through complex Mexican temporary residency processes, successfully helping them secure their resident status, while optimizing travel itineraries to identify the most cost-efficient flight options.

EDUCATION

Bachelor of Applied Science in Applied Technology | Mar 2018 – Aug 2023
Brigham Young University–Idaho | Major GPA: 3.68
Certificates: Web Backend Development, Web Frontend Development, Computer Programming | Minor Cluster: Database

SELECTED PERSONAL PROJECTS | abraham-espi.onrender.com

- **Marvel API Explorer (PHP, CodeIgniter 4, MySQL, Bootstrap):** Full-stack MVC application featuring dynamic CRUD operations and third-party REST API consumption.
- **Flowers E-Commerce (Node.js, Express, MongoDB):** University project demonstrating core full-stack concepts. Developed separate interfaces for admin product management and customer order generation, including secure login and transactional emails.
